RAJAT BEHERA

Software Developer | IoT & Embedded Systems | AI/ML
B.Tech Computer Science and Engineering (IoT) Student
rajatb220m@gmail.com | linkedin.com/in/rajat-behera-5a02b7328/ | github.com/rajatbehera05

PROFESSIONAL SUMMARY

B.Tech Computer Science and Engineering (IoT) student with hands-on experience in full-stack web development, IoT systems, and software engineering. Experienced in building end-to-end applications using Java, JavaScript, React.js, Node.js, Express.js, SQL, and PostgreSQL/MySQL, including ESP32-based hardware integration. Built real-time dashboards, REST APIs, database-driven systems, and IoT automation projects while expanding skills in AI/ML and Data Structures & Algorithms.

EDUCATION

Yeshwantrao Chavan College of Engineering (YCCE), Nagpur
B.Tech in Computer Science and Engineering (IoT) | 2024–2028
Sem 1 – 9.31 | Sem 2 – 9.11 | Sem 3 – 8.74 | Sem 4 – 8.51 | Currently in Semester 5
Shri Mathuradas Mohota College of Science
Class 12 | 83.18%
St. Mary's School
Class 10 | 92.20%

TECHNICAL SKILLS

Languages: Java, JavaScript, Python, SQL
Web Development: HTML, CSS, React.js, Vite, Node.js, Express.js, REST APIs
Databases: PostgreSQL, MySQL, Database Management
IoT & Embedded Systems: ESP32, Arduino IDE, IR Sensors, Servo Motors, IoT Integration
Tools: Git, GitHub, VS Code, Docker
AI/ML: Machine Learning Fundamentals, Data Analysis
Data Structures & Algorithms: Arrays, Searching, Sorting, Basic Problem Solving

PROJECTS

Smart Parking System | IoT & Full-Stack Web Application
React.js, Vite, Node.js, Express.js, ESP32, IR Sensors, REST APIs | *Individual Project*
- Developed an IoT-enabled parking management system combining a web dashboard with ESP32-based hardware integration.
- Implemented real-time parking occupancy tracking, slot availability, reservation, automatic slot assignment, and gate-control workflows.
- Integrated IR sensors and an SG90 servo motor with the backend for physical vehicle detection and barrier control.
- Built REST APIs for parking status, slot assignment, reservations, and sensor synchronization between the ESP32 and web application.
- Tested the system using simulated sensor inputs before integrating physical ESP32 hardware.

DealOrbit | Sales Operations Platform
Odoo, Web Development, Database Systems | *Odoo Hackathon Project*
- Developed a sales operations platform focused on quotation-to-cash workflows and deal strategy.
- Designed features around deal validation, scenario exploration, and sales decision support.
- Participated in the 24-hour Odoo Hackathon as part of a team and reached the finalist stage.

TransitOps | Smart Transport Operations Platform
Next.js, Node.js, Express.js, PostgreSQL | *Individual Project*
- Developed a full-stack platform for managing drivers, vehicles, trips, and transport department operations.
- Implemented vehicle availability, trip management, and damage/maintenance logging.
- Designed a relational PostgreSQL schema supporting relationships between drivers, vehicles, trips, and maintenance records.

FleetFlow | Fleet & Logistics Management System
Next.js, Node.js, Express.js, SQL | *Individual Project*
- Developed a logistics management system focused on fleet visibility, vehicle availability, and operational workflows.
- Implemented REST APIs for core fleet and logistics operations.

Java DSA Practice
Java, Data Structures & Algorithms, Git/GitHub | *Learning / Practice*
- Practicing core DSA concepts including arrays, searching, sorting, time-complexity analysis, and placement-oriented problem solving.
- Maintaining Java problem-solving work using Git and GitHub.

AI/ML LEARNING

Machine Learning fundamentals and practical data analysis.

ACHIEVEMENTS

· Hackathon · 1st Runner-Up
· Odoo Hackathon · Finalist
